
Thumb Pain

Introduction

Most thumb pain has a very simple cause and can settle with time. The pain may come from strained or inflamed soft tissues such as tendons and ligaments or the joints themselves. You can often manage this pain yourself with over-the-counter medication speak to your pharmacist (for advice).

A period of rest from activities that aggravate symptoms can help, however it is important to maintain gentle movements of the thumb to prevent stiffness. Gentle exercises such as the ones below, can help reduce pain and stiffness.

Should I see a Medical Professional?

Most cases of thumb pain will improve with time or self-help. However you may need to see your doctor or physiotherapist if you have tingling, numbness or weakness in your thumb or if your pain doesn't settle sufficiently.

You should attend A+E if you have injured your thumb, if it is misshapen, swollen, hot, red and severely painful.

What can I do to help ease my symptoms?

- Over-the-counter medication can help (speak to your pharmacist for advice)
- Ease up on aggravating activities and try to use your thumb in a different way for a period of time.
- Try and keep the thumb moving.
- Try the general exercises on this sheet.
- Don't worry most symptoms will improve over time.

[Video](#)

- a) Elbow or back of your hand on a table.
Put your thumb against each fingertip in turn.
Repeat 10 times.
- b) Practise picking up small objects.
